

market but this software mainly concentrates on advanced features. GIMP is a user-friendly software which includes most of the sophisticated tools that attract graphic designers, photographers, and illustrators. As it's an open-source software, it allows anyone to edit or modify the core code and include new plugins, which don't need any kind of approval from the main development team. The software is available to download from the Microsoft Store.

LightZone

Lightzone, a commercial software, is a pretty good alternative for Adobe Lightroom. It can convert RAW files into simpler formats. It comes with a clean and stylish interface with a dark theme, which is essentially what made it popular among the image editing apps. The software interface is split into two distinct sections – a browse window for navigating through the files in your system and an editing window which enables the user to work on images in a specific area. LightZone is a pro-level photo editor software which provides a comprehensive editing experience by handing full control access to the user. The set-up is relatively intuitive for newbies as well. Unlike other software though, it doesn't allow sharing through email or other methods, as it saves files to the system organiser.

Why you must get it:

The main reason to get LightZone is that it is a complete package. It has
