

They have the anti-fraud system, personalized interface solution, security solution, and even an option to add domain or connect your company directly on their platform. This platform ensures that your desired level of security at all levels stays stagnant- application, infrastructure, software development and systems.

Features offered include enterprise collaborative spaces, social networking, calendars, task management, document management, video conferencing, content publishing, private or team chat, and a unified search function which makes data from different sources easily accessible.

4. Salesforce Chatter

Chatter is a Salesforce real-time collaboration application that lets your users work together, talk to each other, and share information. Chatter connects, engages, and motivates users to work effectively across the organization, irrespective of their role or location. The embedded apps and custom actions allow users to collaborate on sales opportunities, service cases, campaigns, and projects.

If you already use the Salesforce platform, Salesforce Chatter provides a lot extra. Using it, your users can collaborate securely and share status updates with each other. Building networks, following people, and sharing information are some of the features you can use. You can set up groups and decide who gets access to different files.

5. Igloo Software

Igloo Software has helped organizations collaborate, communicate, and engage employees by providing exhaustive and robust digital experiences. Igloo is more
