    stopwords: set[str] = STOPWORDS / ("see", "use", "using", "tutorial", "mode", "js", "4")
    wc: WordCloud = WordCloud(
        background_color="black",
        min_words=2000,
        mask=mask,
        contour_width=10,
        contour_color="white",
        stopwords=stopwords,
    )
    return wc.generate(content)

```

user-friendly makes it a popular language for most developers who are working with machine learning algorithms using low-code no-code (LCNC) software applications.

Python has an easy syntax. The language is also known for its large community that actively contributes to its increasing software modules and libraries. To sum things up:

- **Python is Interpreted** - This language is processed at runtime by the interpreter. A developer does not need to compile the program before executing it.
- **Python is Interactive** - The developer can sit at a Python prompt and interact with the interpreter directly while writing the programs.

```

Python 3.6.0 (default, Jan 13 2017, 00:00:00)
[GCC 4.8.4] on linux
