

Create a string variable

```
• public class Main {
•     public static void main(String[] args) {
•         String name = "John";
•         System.out.println(name);
•     }
• }
```

Create an integer variable

```
• public class Main {
•     public static void main(String[] args) {
•         int myNum = 15;
•         System.out.println(myNum);
•     }
• }
```

Create a variable without assigning value

```
• public class Main {
•     public static void main(String[] args) {
•         int myNum;
•         myNum = 15;
•         System.out.println(myNum);
•     }
• } d
```
