

## User input

```
using System;

namespace MyApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            // Type your username and press enter
            Console.WriteLine("Enter username:");

            // Create a string variable and get user input from
            // the keyboard and store it in the variable
            string userName = Console.ReadLine();

            // Print the value of the variable (userName), which
            // will display the input value
            Console.WriteLine("Username is: " + userName);
        }
    }
}
```

## Addition operators

```
using System;

namespace MyApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            int x = 5;
            int y = 3;
            Console.WriteLine(x + y);
        }
    }
}
```
