

```

unchecked::<u8>());
    // nan as u8 is 0
    println!("nan as u8 is {}", f32::NAN.to_int_
unchecked::<u8>());
}
}

```

Blocks

```

fn main() {
    let x = 5u32;
    let y = {
        let x_squared = x * x;
        let x_cube = x_squared * x;
        // This expression will be assigned to `y`
        x_cube + x_squared + x
    };
    let z = {
        // The semicolon suppresses this expression and `()`
is assigned to `z`
        2 * x;
    };
    println!("x is {:?}", x);
    println!("y is {:?}", y);
    println!("z is {:?}", z);
}

```
