

- Professional Certificate in Music Production
- Bachelor's Degree in Music Production

4. Mastering Engineer

A career as a mastering engineer could be ideal for you if you have a good ear and a subtle-yet-powerful approach to the music you work on. The Mastering Engineer is the music production artist responsible for making the final modifications to a piece of recorded music. This position requires the Mastering Engineer to combine their technical expertise with an exceptional ear for detail.

You need to have comprehensive training in audio technologies, record production, and the ever-elusive “musician’s ear,” which may be fine-tuned through experience and an education from a top music production school. This is necessary if you want to work as a Mastering Engineer.

You will also need an in-depth understanding of the various types of music and the various ways it can be played and enjoyed in order for the final recording to function properly not only as an MP3 but also in physical formats such as vinyl, played through loudspeakers as well as earbuds, streamed on a computer, or played in a movie theatre. This is because the final recording will need to be compatible with all of these different forms and ways in which music can be played and enjoyed.

You should begin your career as a Mastering Engineer by working in a recording studio or on a postproduction team in a more entry-level position.
