

The following are examples of applicable classes and programmes:

- Online Course: Audio Post Production for Film and TV
- Professional Certificate in Music Supervision
- Bachelor's Degree in Music Composition for Film, TV, and Games

6. Live Sound Engineer

Work as a Live Sound Engineer if your enthusiasm for music takes you away from the recording studio and into the great outdoors. Live Sound Engineers are in charge of maintaining a high level of sound quality during live music performances.

Working with sound in a studio or on a set is very different from being a live sound engineer. The two settings offer very distinct challenges. A Live Sound Engineer creates their magic in the moment, as opposed to working in a studio, which features a controlled acoustic environment and allows for the easy correction of faults.

When it comes to providing a high-quality sound production to a live audience, the size, shape, and material of a venue, as well as the technical equipment located within the venue, can each provide their own distinct obstacles. After all of the equipment has been brought in and set up, the Live Sound Engineer will conduct a sound check to adjust the volume, balance, and EQ levels. This will often take place several hours before the performance is scheduled to begin.
