

guitar, while the second verse includes the bass and the drums, and the first chorus adds the synths and the vocal harmonies. This is the configuration of all of the different instruments that are featured in the song.

It is not necessary for an instrument to continue to be played simply because it was initially included in the performance. Sometimes you only want a certain instrument to play during the pre-chorus, or you'll bring it in during the second half of the final chorus for climactic impact, or you'll have a part playing only on the left side for the first half of the verse, and then in stereo for the second half of the verse. These are all examples of when you might want a particular instrument to play only during the pre-chorus. There is no limit to the possibilities. It is essential to keep things moving forward at all times. Even unobtrusive enhancements have the potential to pique the interest of the audience, regardless of whether or not they are conscious of this fact.

There is also the issue of deciding how many different sections to incorporate. You might like to judge by feel. You can typically get a gut feeling when a part has reached its limitations or when you need to mix something up to keep people interested in what you have to say. One more time, the song should always have some kind of feeling to it, even if it's really understated. The addition and subtraction of instruments should create a sense of rising and falling energy while also providing opportunities for unexpected turns and twists. You can also discuss arrangement on the level of the harmony
