

performance every time you have to pause to make a change. Put off the editing process until a later time.

Second, you need to be careful not to modify the song too much or it will end up sounding too “chopped up” and emotionless. Instead of spending twice as long, or even more time, trying to edit something believable together, if you think about editing in a secondary way, you will make more of an effort to give a solid performance and capture what you need live. This will allow you to avoid having to spend as much as twice as much time.

When it comes time to edit, you should approach this section with the mindset of “do no harm.” If it has a good sound to it, then there is no need to modify it. Utilise this stage to fix pitches that aren’t quite there, move around portions that aren’t in time, or polish songs by fading the beginnings and ends of each part so that they come in and out cleanly. At this point, the only thing that should be prioritised is making sure that the performance sounds as fantastic as it possibly can.

Reading more to understand how to prepare your production for mixing can be very helpful if you are unsure about whether or not your track is prepared to be mixed, either by you or by another engineer.

Mixing

Many people consider this stage to be the beginning of the fun part. You’ve already composed your song and recorded the individual parts; now it’s time
