

Gear and your studio setup

You don't need much, but a digital audio interface, a digital audio workstation (such as Studio One, Live, or Logic Pro), headphones or monitors, and potentially a MIDI keyboard or controller and a quality microphone are all you really need. Don't worry about soundproofing the entire space, purchasing the most advanced computer, or investing in high-end studio monitors at this point; just concentrate on the things that are absolutely necessary. You have everything you need to get started with your setup if it produces sound, you can listen to the entire frequency spectrum, and you can input notes. Rather than focusing on attaining perfection and trying to sound professional, you should focus on getting your music out there as quickly as possible. In the meantime, do whatever it takes to get your music out there. Those results are just a matter of time!

But there is one part of your environment that you want to master as soon as possible: you want to structure it in a way that reliably enables you to work swiftly and in a relaxed manner. This is something that you want to accomplish as soon as possible. Make sure that your production space is designed to help you enjoy it as much as possible, whether that means hanging posters from your favourite game or movie franchise, keeping your desk as clean as possible, or ensuring that you don't work where you sleep. Whatever it is, make sure that your production space is designed to help you enjoy it! When a mix isn't
