

What's next

It's possible that all of this information will come at once, and that's a wonderful thing! As a music producer, all you need to do to succeed is familiarise yourself with the many concepts and sources that we've discussed in this chapter. When you sit down in front of your digital audio workstation (DAW), move swiftly and don't look back! Take your time to process everything and dive in, but once you do, go rapidly and don't look back! The more songs you put out, the more experience you'll earn from performing them (and in less time).

The path to becoming a music producer involves a significant number of obstacles, but if you consider the moments of pride and development that come with expressing oneself through music, the route is more than worthwhile. Learn to embrace the challenges, take pleasure in the journey, and get to work. **d**
