

Mixdown

Organisation

Editing and mixing become more of a process and less of a struggle when you have a well-structured project and organise your files well.

You should organise your songs into groups according to their nature, as well as the dialogue, background noise, auxiliaries, and potential effects. The majority of digital audio workstations, also known as DAWs, are equipped with folder and grouping structures, which make it easier to perform mass edits and keep regions together.

When you get to this step, it's prudent to usually consolidate the first set of cuts and trims into one, it will help you get rid of a lot of clutter.

Levels and panning

You may now begin to create a functional balance out of the sounds you already have now that you have a skeleton that is functioning properly. This lays the groundwork for you to add EQ, compression, and any number of other audio filters and effects.

Mutes, cuts, and fades

When in doubt, mute it! To begin, remove any moments of silence and sounds
