

generated using two AI frameworks. Google's Magenta produced the music by analyzing dozens of original Nirvana recordings, while a neural network generated Cobain-like lyrics delivered by the singer of a Nirvana tribute band. It is conceivable that AI tools will soon be used to produce commercial music for specific purposes such as a 30-second commercial.

As AI continues to evolve, we can expect more innovative applications in the music industry, revolutionizing the way music is created, performed, and distributed.

AI and Content Generation

Envision a future where scrolling through stock photo sites to find the perfect image for your marketing campaign becomes a thing of the past. Imagine creating captivating videos from a mere piece of text reference. This is where Synthetic Media steps in, revolutionizing content creation for both businesses and consumers. With the rapid advancements in synthetic content generation technology, a wide range of applications will benefit from AI-generated content. Dall-E is just the beginning of what's possible!

Synthetic Media is set to transform the landscape of content creation and advertising. AI-generated content has evolved beyond text-based and
