

ates text. By generating more content with the available budget, you can focus on other plans to achieve greater traction.

Using a content generator can raise the quality of your written content. You can produce more material with a generator, making it easier to uphold a high-quality content strategy. Additionally, you can direct the software to produce output with the desired quality and publish engaging, high-quality content.

AI and Art

Recently, there has been a proposal that the AI gold rush has finally arrived, but despite the extreme media hype surrounding AI and neural-net-based AI art, its presence in the established art world is minimal. AI art is currently an insider's game, with a small number of protagonists driving much of the aesthetic and critical output. Although this is not necessarily negative, it is often overlooked in popular descriptions of the state of AI art.

So far, AI art exhibitions have been almost trade-show-like, showcasing works that use or even just mention machine learning in a broad sense. For example, the “AI: More Than Human” exhibition at the Barbican in London includes tech demos, decorative pieces, and works of AI art.

AI art is limited to the scope of the dataset it operates on and can produce artefacts that can be mapped to the real world in a one-to-one fashion. However, a novelty only happens within this scope. For instance, a GAN trained on van Gogh paintings can produce interesting variations of van Gogh-like images,
