

Name specific artists

Stable Diffusion offers more than just the ability to emulate styles or mediums; it can also replicate the styles of specific artists. For instance, you can try using the name of an artist like Pablo Picasso in your prompt.

Adding “by (Artist Name)” to your prompt can yield stunning results. Don’t hesitate to mix and match artists whose styles might seem incompatible. The software often blends their styles in novel and unexpected ways.

Weight your keywords

Although simply adding keywords to your prompt can be helpful, it may not always produce the desired results, especially if the proportions are off. This is where weighting of prompt keywords comes in handy. Stable Diffusion allows you to tell it which keywords to prioritize and which to pay less attention to. In the command-line version, you can do this by adding a full colon followed by a decimal number to the emphasized word, with the decimals totaling to 1.
