

What's with AI?

All the love, all the hate, all the buzz
on social media. What's it about?

Recent developments in artificial intelligence (AI) are making the future of content generation and technology look very promising. From AI chips that can run deep neural networks faster to new conceptual frameworks like reinforcement learning and program synthesis, there's a lot of exciting progress being made.

One of the most significant developments is the creation of new chips that can process data faster than ever before. These chips are crucial for running complex algorithms like deep learning, which require a lot of processing power. In fact, the latest chip dubbed the "world's smallest neural network computer,"
