

on crisis-prone words or phrases like “I’ll leave your business.” For leads, AI can recognize phrases that indicate a potential sale, such as “I’m interested in buying next week.” By tagging urgency and triggering appropriate actions, businesses can effectively prioritize and respond to customer needs.

Human Resources

The COVID-19 pandemic has drastically transformed the work environment for human resource (HR) teams. With the growing popularity of hybrid and remote working, HR teams face new challenges in virtual recruitment and promoting diversity and inclusion. To stay competitive, companies need to adopt new platforms and technologies, with AI playing a central role in this transformation.

Here are some examples of how AI is currently being used in HR:

1. **Candidate analysis** - Many companies use AI to aid in the hiring process by analyzing candidate profiles. By examining past work experiences and interests, HR managers can use AI to match potential candidates with the best roles.
2. **Organizational Network Analysis** - AI can also assist companies in becoming more sustainable and successful by analyzing formal and informal relationships within the business. This can help develop business strategies that promote the organic exchange of information.
