

Top AI Music Apps to Try!

1. Soundraw.io

With SOUNDRAW, creators can easily craft innovative compositions without any prior music composition expertise. In just a few minutes, you can produce songs that perfectly complement your content. Users can create unlimited tracks and can download up to 50 songs per day, based on the payment plan chosen. By simply describing the desired qualities of your song to the AI, it can generate multiple variations for you to choose from. Once you've selected a preferred version, you can further customize it to seamlessly match your content.

2. MusicLM

MusicLM is a model that creates high-quality music from text descriptions, like “a calm violin melody accompanied by a distorted guitar riff.” The model approaches the task of generating music as a hierarchical sequence-to-sequence modelling process and produces consistent 24 kHz music for several minutes. Our research indicates that MusicLM surpasses previous systems in terms of audio quality and adherence to the text description. Additionally, we demonstrate that MusicLM can be conditioned on both text and melody by transforming hummed and whistled tunes to match the style outlined in a text caption. We've released the MusicCaps dataset, which contains 5.5k
