

pairs of music and text, featuring detailed descriptions by human experts, to support future research.

3. Amper Music

Amper is created to produce original music with minimal input required. Each composition is crafted note by note without any pre-existing material, licensed music, or loops. It is generated entirely from scratch and performed, produced, and recorded in real-time, making it truly unique. The AI is now owned by Shutterstock. The platform operates by evaluating the user's needs, which encompasses the genre, mood, and desired length of the music track. With this data, the platform produces an entirely original music piece that fulfils those particular requirements.

4. Amadeus Code

Established in 2012, Amadeus Code was created by a team of music producers who sought to equip musicians with the capabilities of AI. AI is capable of generating songs at a much faster rate than humans. Presently, Amadeus Code is constructing a production and worldwide distribution platform for science-based efficient music (fMusic™), while simultaneously empowering musicians. At Amadeus Code, the team maintains the belief that music has a direct impact on the brain and can unlock and elevate the potential of human beings.

5. Beatoven

Beatoven.ai simplifies the process of creating distinctive music by removing the complexities of advanced music theory and production techniques. In just a few simple steps, you can compose original music that complements your content.

Whether you're starting with a track or uploading a video/podcast, choose from eight different genres that suit your theme. The tool is based on the understanding that the mood of content can change over time. That's why you can make multiple cuts to add different moods. You can select from a diverse array of 16 moods to find the perfect fit for your cuts. Finally, you can hit the "compose" button and let our AI do the heavy lifting of generating a unique track for you.
