

marketing staff's operational tasks will be redirected to strategic activities by 2025 as organizations incorporate AI into their marketing operations.

Commerzbank, a German bank, is utilizing AI to create equity research reports to reduce research costs and time. While the process is not yet fully automated, the technology can complete about 75% of what a human equity analyst would do. Many newsrooms worldwide are employing automated journalism applications to speed up research, fact-checking, workflow, comment monitoring, fake news elimination, and even content writing. The Associated Press is using AI to produce thousands of sports reports, where the software filters information and determines insights that are relevant to the reader based on the narrative design.

1. Research

If you have ever attempted to write a blog or similar content, you know how much time and effort goes into planning and researching a topic that you hope will resonate with your audience. Sometimes it pays off, but other times it can feel like a fruitless endeavour.

Fortunately, with the help of an AI content writer, those long hours of research may become a thing of the past. Using algorithms to track and identify online conversations, artificial intelligence can pinpoint the most popular and engaging types of content among a target audience, providing guidance to marketers on creating effective content.
