

uncovers fresh correlations that can assist you in bolstering research plans and clinical judgments.

4. Wizdom.ai

Wizdom.ai is an advanced AI research tool that constantly monitors billions of data points from the global research ecosystem to provide valuable insights for your decision-making process. With numerous features, it can help you:

1. Discover emerging hotspots and research trends in your field around the world
2. Identify top researchers and institutions for potential collaboration in your research area
3. Analyze grant trends to identify potential funders for your project
4. Visualize your personal research graph of publications, citations, and grants in the context of global emerging trends
5. Analyze your article library to find key papers and cite them with the help of an AI-powered citation recommender
6. Benchmark your research performance globally against other institutions in terms of grants, researchers, and publications
7. Identify renowned researchers for key research projects, cross-institutional collaboration, or new departments
8. Identify your institute's researchers who are leading with the biggest research grants and highest impact publications
9. Predict emerging research areas to get ahead of the curve and lead the research
10. Empower your researchers with intelligent analytics and Colwiz research software, backed by Wizdom.ai, to enhance their research productivity.

5. ChatGPT

ChatGPT can be used for research in a variety of ways. Here are some steps to use ChatGPT for research:

1. **Determine the research question:** Start by defining the research question or problem you want to solve. This could be anything from finding information on a specific topic to conducting a literature review.
2. **Phrase the question in a clear and concise manner:** Ensure that the research question is well-constructed and free from ambiguity. This will help ChatGPT to provide a more accurate and relevant response.
3. **Input the question to ChatGPT:** You can input the question to ChatGPT via a chat window or text input box. Be sure to provide any necessary context or additional information to help ChatGPT understand the question.
