

Revamp your videos with the power of AI-generated captions and subtitles. With the growing demand for social media videos, it's become essential to make them accessible to a wider audience. By adding subtitles, you can improve the watchability of your videos and reach a larger audience.

Did you know that the majority of videos on LinkedIn and Facebook are watched on mute? Adding subtitles gives you an edge over others and helps you reach a wider range of viewers.

Subtitles create a more engaging viewing experience as you offer your audience three different formats - video, audio, and text. They also help to highlight and convey important content, allowing viewers to focus more without getting distracted.

For those who prefer watching videos while traveling, subtitles come in handy. They enable everyone to consume content in a better way without being uncomfortable with high volume.

Gone are the days of hiring someone to transcribe your videos. Vidyo.ai offers AI-powered subtitles with an accuracy rate of 95% and can do the job in just a matter of minutes, whereas editors may take days to complete the same task.

8. Maverick

Maverick leverages AI-generated videos to enable ecommerce stores to offer personalized interactions with their customers throughout their journey. With Maverick, you can address your customers by their name without having to create a new video for each of them. By showing the faces behind your brand, you can foster authentic connections with your customers and build genuine relationships with them.

Maverick also provides automatically personalized video messages that can be delivered through personalized emails and branded video pages.

Maverick allows ecommerce stores to send personalized videos to their customers at scale, without requiring any engineering work and with only a 45-minute time investment. Here's how it works:

1. Record your base video

Create a video that you want to personalize for each flow, such as a thank you video or an abandoned cart video.

2. Record a script

Record a 15-minute script that captures your voice, which will be used to personalize your base videos.
