

Example: Showing how datatype are dynamically change using dynamic keyword.

```
• void main()
• {
•     // Assigning value to geek variable
•     Dynamic digit = "Digit is a magazine";
•
•     // Printing variable geek
•     print(digit);
•
•     // Reassigning the data to variable and printing
it
•     geek = 3.14157;
•     print(digit);
• }
```

Final And Const Keyword in Dart:

These keywords are utilized to declare constant variables in Dart, which means that the value of a variable defined using these keywords cannot be altered throughout the code. These keywords can be used with or without a data type name.
