

Making Money!

Now that you have the skills, why not monetise it?

Over the last few decades, computers have become a ubiquitous presence in businesses, offices, and households. As the number of computers continues to increase exponentially, so too does the demand for professionals who can maintain and repair them. Computer maintenance professionals are responsible not only for the upkeep of individual computers, but also for the maintenance of servers, networks, and accessories that connect computers to each other or to the internet.
