70. How should I clean my PC?

Answer: You can use a soft, dry cloth to wipe down the exterior of your computer and a can of compressed air to blow dust out of the inside. Be careful not to touch any delicate components, and consider using an antistatic wristband to prevent static electricity from damaging your PC.

Examples to learn from

Issue: Your computer is running slowly and taking a long time to load programs.

Solution:

This could be due to a number of issues, but one of the most common reasons is a buildup of temporary files and other clutter on your hard drive. Here's how to fix it:

- **Run a Disk Cleanup.** This built-in tool in Windows will scan your hard drive for temporary files and other junk that can be safely deleted. To access it, go to your Start menu and search for "Disk Cleanup."
- **Uninstall any unnecessary programs.** Over time, you may have installed programs that you no longer use, which can take up valuable space on your hard drive and slow down your computer. Go to your Control Panel and select "Programs and Features" to see a list of all installed programs. Uninstall any that you no longer need.
- **Disable unnecessary startup programs.** Some programs
