

The World of Prompting

It's like Mariana Trench inside a server

Artificial intelligence (AI) prompts are commands or queries given to an AI model to generate a response. These prompts can be categorized into two types: basic and advanced. Basic prompts are simpler, more straightforward queries that require the AI model to generate a relatively simple response. On the other hand, advanced prompts are more complex queries that demand the AI model to generate a nuanced and comprehensive response. The type of prompt used depends on the task or application for which the AI model is being employed. In this context, it is important to understand the differences between basic and advanced prompts and their respective uses in AI applications.

Basic Prompting

1. Instructions

Instructions are a crucial component of prompts that are extensively used in various applications. In essence, instructions are commands that direct the AI model on what actions to perform. Despite being a simple concept, implementing instructions can be intricate in practice. To demonstrate this, the following table showcases examples of both simple and complex instructions in two distinct formats.

2. Primary Content

Primary content is the text that the AI model processes or modi-
