

Do it Yourself

Now you know how it works... So give it a try!

In this chapter, we will delve into the exciting world of do-it-yourself (DIY) home automation setups. We understand that not everyone has the budget or expertise to invest in complex automation systems. Therefore, we will guide you through some simple DIY setups to kickstart their journey towards creating a futuristic home.

Voice-activated lighting control

Imagine walking into a room and commanding the lights to turn on without lifting a finger. With voice-activated lighting control, this becomes a reality. To achieve this, you'll need a smart speaker like Amazon Echo or Google Home, along with smart bulbs compatible with these devices. Install the smart bulbs in your desired rooms, connect them to your smart speaker, and voila! You can now control your lights with simple voice commands.

Smart plugs for appliance automation

One of the easiest and most affordable ways to dip your toes into home automation is by using smart plugs. Smart plugs can turn any regular appliance into a smart device. Simply plug the smart plug into a power outlet, connect your appliance to it, and you can control it remotely using your smartphone or voice commands. You can schedule your coffee maker to start brewing in the morning or turn off your television automatically when you leave the house.

DIY security system

Home security is a top priority for many homeowners. Creating a DIY security system is an excellent way to enhance the safety of your home. Start by installing security cameras in strategic locations, such as entry points and common areas. Many affordable options are available in the Indian market
