| Ctrl + N               | Cmd + N         | Create a new page (desktop only)             |

## Understanding Blocks:

Blocks are the foundation of creating content within Notion. They encapsulate a piece of content, whether it's text, an image, a checklist, a database, or even another page. The modularity of blocks allows for a highly flexible and customizable workspace, enabling users to construct pages that suit their specific needs.

### Creating Blocks:

- To create a block, simply click on a blank line and start typing or paste content. Hit 'Enter' to finalize the block.
- You can also click the '+' icon on a new line to open the block menu, showcasing various types of blocks you can create.

### Block Types:

- There's a wide variety of block types including text, headings, bulleted lists, numbered lists, to-do lists, toggle lists, quotes, databases, embeds, and many more.
- Each block type has its own set of features and functionalities.

### Manipulating Blocks:

- Blocks can be moved around by clicking and dragging the six-dot icon that appears to the left of a block when hovered.
- They can be nested within other blocks by dragging and dropping them into place, allowing for hierarchical structuring of content.

### Formatting Blocks:

- Blocks can be formatted using the formatting bar that appears when a block is selected, or by using keyboard shortcuts.
- For instance, you can bold text, create headings, add links, or even change the color of text and background.

### Transforming Blocks:

- Blocks can be transformed into other types of blocks by clicking on the six-dot icon and selecting a new type from the menu that appears, or by using the /command followed by the block type.

### Deleting and Duplicating Blocks:

- Blocks can be deleted by selecting them and hitting Backspace or Delete on your keyboard.

- They can also be duplicated by right-clicking and selecting 'Duplicate' from the context menu.

## Mobile Navigation

Navigating Notion on mobile devices brings a slightly different experience compared to the desktop version. However, it's designed to be intuitive and user-friendly, ensuring you can manage your work on-the-go.

### Accessing the Sidebar:

On mobile, access the sidebar by tapping the hamburger icon (three horizontal lines) at the top left of the screen.

### Creating New Pages:

To create a new page, tap the '+' icon at the bottom right of the screen.

### Navigating Between Pages:

Use the back arrow at the top left to go back to the previous page or the sidebar to jump between pages.

### Searching and Quick Find:

Access the search by tapping the magnifying glass icon at the top right.

### Creating and Managing Blocks:

Creating and managing blocks on mobile is similar to desktop but optimized for touch. Tap on a block to select it, and a toolbar will appear for formatting.

### Block Menu:

Access additional block options by tapping the six-dot icon next to a block, where you can move, delete, or duplicate blocks.

### Syncing Between Devices:

All changes made on mobile will sync automatically with the desktop version, ensuring seamless transition between devices.

### Notifications:

Notifications can be accessed by tapping the bell icon at the top right, keeping you updated on the go.

### Settings and Members:

Access settings by tapping your profile picture at the top left, where you can manage your account and workspace settings.

Navigating Notion's interface is foundational for effective usage. This chapter demystified the sidebar, top menu, and workspace areas, explored the hierarchy of workspaces, pages, and sub-pages, and discussed ways to enhance productivity through bookmarks, shortcuts, and multitasking features. With these insights, you're a step closer to mastering Notion, setting the stage for delving into creating and formatting content, which will be discussed in the next chapter. **d**
