

of each platform can help readers identify where they might want to start or expand their Metaverse journey.

Setting Up and Customising Your Virtual Space

Creating and customising a personal or professional space in the Metaverse is a fundamental aspect of your digital presence. This section provides a comprehensive guide on how to set up and personalise your virtual space across different platforms, using various tools and applications.

1) Deciding on a Platform for Your Space

- **Consider Your Purpose:** Choose a platform based on your intended use – socialising, business, gaming, or creative expression. For example, The Sandbox or Minecraft for creative building, Second Life or Decentraland for social and business environments.
- **Platform Research:** Understand each platform's features and limitations. Visit community forums or watch tutorials to get insights into what's possible in each space.

Metaverse	Ownership Model	Interactivity	User Base	Customization
Decentraland	Blockchain-based, digital ownership & economy	Social interaction, digital real estate, virtual events	Cryptocurrency enthusiasts, investors	High (NFTs, cryptocurrency transactions)
Roblox	Centralised server, user-generated content	Wide range of user-created games and experiences	Children, young teens	Extensive (avatars, game creation, Lua coding)
VRChat	Social platform, less focus on economy	Strong on social interaction, less emphasis on gaming	Social VR users	Extensive (avatar customization, 3D modelling skills)
The Sandbox	Blockchain-based, similar to Decentraland	Gaming, digital real estate, content creation	Gamers, blockchain enthusiasts	High (blockchain transactions)
Second Life	Traditional digital economy	Social interactions, digital commerce, role-playing	Diverse, including older demographics	Extensive (avatars, environments)
Minecraft	Centralised server, building/exploration focus	Creativity, building, survival elements	Wide range, especially younger players	In-game customization, modding, server creation

Similarities Across Platforms

- **Social Interaction:** Emphasis on community and social engagement.
- **Customization:** Varied levels of avatar and environment customization.
- **User-Generated Content:** Encouragement or reliance on user-created content.

Differences Across Platforms

- **Ownership Model:** Variance between blockchain-based and traditional models.
- **Target Audience:** Each platform caters to different age groups and interests.
- **Economic Model:** Differences in handling in-game economies, from real money and cryptocurrency to in-game currencies.
