

appropriate and not fear-inducing, aiming to empower rather than scare.

Strategies for Education

Educating children and teens about online safety should be an ongoing conversation, not a one-time lecture. Here are effective strategies to incorporate this education into everyday life:

- **Use Real-life Examples:** Discuss recent news stories or hypothetical scenarios to illustrate online risks and the importance of privacy and security.
- **Leverage Interactive Resources:** Utilise online safety games, quizzes, and videos designed for young audiences to make learning about online safety engaging and memorable.
- **Set a Positive Example:** Model safe and responsible online behaviour yourself. Show how you protect your privacy and information online, demonstrating the practices you're teaching.
- **Create a Family Internet Use Plan:** Involve children in setting rules for online use, including which sites are okay to visit, what information is safe to share, and time limits for internet use.

Parental Controls and Monitoring Tools

Parental controls and monitoring tools are essential components of a comprehensive online safety strategy. They can help manage and protect children's online experiences, from filtering out inappropriate content to limiting screen time.

Overview of Parental Controls

Parental controls are software tools and device settings that allow parents to control their children's internet use. They can filter content, block access to certain websites, set time limits, and monitor activity. Most operating systems, internet browsers, and digital devices offer built-in parental controls.

Implementing Parental Controls

Setting up parental controls effectively requires a tailored approach, considering the child's age, maturity level, and the specific risks you aim to mitigate.

Here's how to get started:

On Home Networks:

- **Router Settings:** Access your home router's settings through a web browser, usually by entering the router's IP address. Look for parental control settings, where you can block inappropriate websites and set internet access schedules.
