

18 > Managing Time and Distractions

phone usage and encouraging regular breaks. The app tracks how much time you spend on each app and sends you alerts to take breaks, which is vital for preventing digital eye strain and cognitive fatigue. If you're working on a long project, StayFree can remind you to take a five-minute break every hour to stretch or do a quick meditation, helping maintain your physical and mental health.

YourHour - ScreenTime Control

YourHour offers a suite of tools to help manage and reduce your screen time. With features like 'Floating Clock' and 'Screen Stopwatch,' it provides real-time tracking of your phone use. The app categorises users based on their usage patterns and offers customised feedback and challenges to reduce dependency. For example, if categorised as a 'Phone Addict,' YourHour might propose challenges like reducing screen time by 20% over the next week, and it offers support and reminders to achieve these reductions, fostering healthier digital habits.

Screen Time - Restrain Yourself

Screen Time - Restrain Yourself is designed to actively manage and monitor your digital habits, helping you find a balance between connectivity and productivity. The app allows users to set specific daily limits on their most used apps, and notifies them when they're nearing or have exceeded these limits. For instance, if a user tends to spend excessive time on Instagram, they can set a daily limit of 30 minutes. Once reached, the app automatically restricts access, helping users to curb their social media browsing and encouraging them to engage in other activities, thus fostering healthier digital habits.

OffScreen

OffScreen helps you to become more mindful of your daily phone usage by tracking how frequently you unlock your phone and the cumulative time spent on the screen. It provides motivational challenges to reduce these numbers. For example, if a user habitually checks their phone right after waking up, OffScreen can suggest alternative morning routines, such as doing a short workout or reading a book, instead of reaching for the phone. This can help users start their day more productively and reduce dependency on digital devices.

ScreenZen

For effective digital detox, this app offers a unique approach to managing screen time by analysing your usage patterns and suggesting personalised interventions. It identifies periods when you are most likely to use your phone excessively and provides gentle reminders to encourage breaks. For instance, if ScreenZen detects extended periods of screen time in the evenings, it might suggest scheduling screen-free activities such as family game nights or evening walks, thus promoting better habits and enhancing overall well-being.

Moment

Moment is an app designed to help users monitor and reduce their screen time through detailed insights and practical coaching sessions. The app provides real-time feedback on your phone usage and establishes daily goals to encourage less screen time. For example, if a user spends a significant

portion of their day on YouTube, Moment can set a gradually decreasing daily limit for this app and provide tips on other ways to unwind, such as suggesting offline hobbies that align with the user's interests, thereby helping to cultivate a more balanced digital life.

Qustodio

This app is an advanced parental control software that helps parents oversee their children's digital activities across multiple devices. With features such as real-time internet filters, time management, and app control, Qustodio ensures that children's online experiences are safe and constructive. For example, Qustodio can be configured to block access to gaming sites during homework hours, while allowing educational tools, ensuring that children focus on their studies without distractions. It also offers detailed activity reports, giving parents insights into how their children spend their digital time and helping them enforce appropriate boundaries.

Norton Family

Norton Family provides comprehensive tools for parents to help manage and protect their children's online experience and foster healthy digital habits. The app allows parents to track the sites their children visit, the search terms they use, and the videos they watch, along with the time they spend on each device. For instance, if a child is spending an unhealthy amount of time on video streaming services, parents can use Norton Family to set specific, allowable times for these activities, or block these services during school nights, thus helping maintain a healthy balance between leisure and responsibilities.
