

NON-MOBILE, PC ONLY APPS

TimeCamp PC

This is a powerful time-tracking software designed for desktop use, perfect for freelancers, teams, and enterprises looking to enhance productivity and track work hours automatically. It integrates seamlessly with your PC, capturing every minute spent on documents, applications, and websites without manual entry. For example, a graphic designer can utilise TimeCamp to monitor the time spent on different design tools and projects, ensuring accurate billing and efficient time management. The app also offers detailed reports and insights, allowing users to analyse productivity trends and optimise workflows accordingly.

Klok

Klok is a desktop time-tracking application tailored for professionals who manage multiple projects and need to keep accurate records of how much time they spend on each. It operates directly from your PC, where you can drag and drop time entries to different projects, making it extremely user-friendly. For instance, a project manager could use Klok to track time spent on client calls, project planning, and email correspondence, helping to better understand where time is being invested and how to allocate it more efficiently in the future.

Cattr

Cattr is a complete desktop-based time-tracking tool that is particularly useful for teams and remote workers. It offers transparent tracking of work activities, providing screenshots and activity levels to ensure accountability. For example, a remote team working on software development can use Cattr to log hours spent on coding, reviewing, and meeting about the project. This helps managers oversee team productivity and manage workloads effectively, even from a distance.

Clockify

This is an effective time management application that allows users to track their hours directly on their PC, ideal for both personal and professional use. It features a simple interface where users can start and stop timers as they switch between tasks throughout the day. For example, a content writer can use Clockify to measure time spent researching, writing, and editing articles, enabling better management of time and helping to stay on top of deadlines. Clockify also supports team use, allowing managers to track their team's time on various projects easily.

DeskTime

DeskTime is a real-time tracking software that automatically logs all your PC activities, providing detailed insights into productivity and efficiency. It's particularly effective for companies looking to optimise employee performance and manage resources more effectively. For example, an IT firm can employ DeskTime to monitor employees' active and idle times, application usage, and web browsing habits, helping to identify productivity leaks and training opportunities. DeskTime also features project tracking capabilities, making it easy to allocate time and resources appropriately.

ActivityWatch

An open-source time-tracking tool that runs in the background of your PC, ActivityWatch quietly monitors all your digital activities in an unobtrusive fashion. It provides comprehensive reports on how you spend your time, helping you to self-monitor and adjust habits that may hinder your productivity. For example, a student can use ActivityWatch to track the time spent on academic websites versus entertainment sites, gaining insights into their study habits and finding ways to reduce distractions during study sessions.

Screentime

Screentime, specifically for PCs, is designed to monitor and report on your overall screen usage. It's particularly useful for those looking to manage digital wellness and reduce the risk of screen-related fatigue. For instance, an author suffering from digital eye strain can use Screentime to set reminders to take breaks from the screen, ensuring they maintain a healthy balance between productivity and health. The app also tracks which applications are most used, allowing users to optimise their digital environment for better efficiency and comfort.
