

MAXIMISE YOUR SLEEP: DO'S AND DON'TS		
Sleep Hygiene Factor	Description	Tips for Improvement
Room Environment	The setup of your sleeping area affects sleep quality.	Keep the room dark, quiet, and cool (around 65°F or 18°C).
Bed Comfort	The comfort of your bed can impact sleep.	Invest in a good quality mattress and pillows that suit your sleeping style (side, back, stomach).
Evening Routine	Activities before bed can help transition into sleep.	Develop a relaxing bedtime routine such as reading, taking a warm bath, or gentle yoga.
Screen Exposure	Light from screens can interfere with sleep hormones.	Avoid screens at least 1 hour before bedtime; use "night mode" settings on devices if necessary.
Caffeine and Alcohol	Stimulants and depressants can disrupt sleep cycles.	Limit caffeine and alcohol intake in the hours leading up to bedtime.
Regular Sleep Schedule	Going to bed and waking up at the same time aids rhythm.	Try to stick to consistent sleep and wake times, even on weekends.
Daytime Naps	Napping can affect nighttime sleep quality.	Limit naps to early afternoons and keep them under 30 minutes.
Physical Activity	Regular exercise promotes better sleep.	Engage in regular physical activity but avoid vigorous workouts close to bedtime.
Stress and Anxiety	Psychological stress can interfere with sleep.	Practice relaxation techniques such as meditation or deep breathing exercises to manage stress.

to enhance their mood. Daylio is great for anyone looking to gain deeper insights into their emotional patterns and lifestyle habits.

Youper

Youper utilises an AI-driven chatbot to provide personalised mental health support. The app helps users manage emotions through interactive conversations where they can discuss their feelings, reflect on their mood patterns, and receive psychological techniques tailored to their needs. For instance, after a stressful day at work, a user can interact with Youper to process their emotions and learn relaxation techniques to reduce anxiety. This makes Youper an accessible and immediate support resource for those seeking emotional guidance and mental health care.

MindShift

MindShift, developed through collaborations with psychologists and researchers, focuses on cognitive behavioural therapy (CBT) to help users learn to relax and develop more effective ways of thinking.

The app is particularly effective for those struggling with anxiety and negative thinking. It provides exercises for challenging irrational thoughts and replacing them with more balanced and positive perspectives. For example, a user dealing with anxiety over public speaking might use MindShift to work through their fears and build confidence through targeted CBT practices.

Pacifica

Pacifica offers a holistic approach to managing anxiety and depression, featuring tools based on cognitive behavioural therapy, mindfulness meditation, and mood tracking. Users can record their mood and health activities to identify patterns and triggers. Pacifica also provides guided self-help paths that help users tackle specific issues like anxiety attacks or sleep problems. For instance, a user experiencing frequent anxiety might follow a guided path on managing anxiety that includes daily exercises, thought diaries, and deep breathing techniques, all integrated within the app to provide a supportive mental health framework.
