Community Service	Volunteering for local causes and events.	Contributes to the community, provides a sense of purpose.	Meetup, Nextdoor
Networking Events	Attending professional meetups and conferences.	Enhances career opportunities, broadens professional network.	Meetup, Eventbrite

the names and elevations of all visible peaks in a 360-degree panorama. For example, when standing on a lookout point, a user can point their phone towards the horizon, and PeakFinder will display an overlay of names and heights over the mountain landscape, enhancing the hiking or mountaineering experience by providing insightful and educational information about the surrounding topography.

Facilitating Physical Exercise

Strava

Strava is more than just a fitness tracking app; it’s a social network for athletes. Ideal for runners, cyclists, and triathletes, Strava provides detailed GPS tracking of your routes, performance analytics, and the ability to compete with friends and fellow

users. For example, a cyclist can use Strava to record their daily rides, analyze speed and elevation gains, and compare their performance with others in their area. Additionally, Strava’s ‘Segments’ feature allows users to see how they fare on specific portions of their routes compared to other cyclists, adding a competitive edge to their training routines. The app also encourages community engagement through clubs and event participation, enhancing the overall fitness experience.

MapMyRun

MapMyRun, by Under Armour, offers comprehensive route tracking and workout data for runners of all levels. Users can log and save routes, track distance, speed, and calories burned, and even get audio feedback on their pace and total mileage during their runs. For instance, someone training for a marathon might use MapMyRun to plan and track their long training runs, monitoring their progress over time. The app syncs with various wearables and fitness devices, allowing for a seamless integration of workout data. It also includes a social feature where you can connect with friends, join challenges, and share your accomplishments, providing motivation and support as you strive towards your running goals.

Runkeeper

Runkeeper is a GPS fitness-tracking app designed to help runners and other fitness enthusiasts set and reach their goals. It offers personalized routines, detailed reports on pace, distance, and time, and motivational coaching. For example, a new runner aiming to complete their first 5K can use Runkeeper to create a tailored training plan, receive audio cues during workouts for pacing, and celebrate achievements with built-in reward features.
