

AI on Mobile Devices

Unlock AI on mobile: Local models, optimization, and applications

Artificial Intelligence (AI) has traditionally been run on powerful servers and cloud-based systems due to the intensive computational power required. However, recent advancements have made it possible to run AI models locally on mobile devices, making AI more accessible and private. Local LLMs (Large Language Models) are one of the key developments in this field, enabling AI functionalities like natural language processing, image recognition, and more, directly on your smartphone.

What are Local LLMs?

Local LLMs are advanced AI models that have been optimized to run on personal devices without the need for constant internet connectivity. These models can perform complex tasks such as
