What is Coding?

Coding, also known as programming, is the process of creating instructions for computers to follow. These instructions are written in programming languages, which are designed to be both

human-readable and machine-executable. Coding allows you to create software, websites, apps, and much more. In essence, coding is the language of technology.

Key Concepts:

- **Syntax:** The set of rules that define the combinations of symbols considered correctly structured programs in a language.
- **Compiler/Interpreter:** Tools that convert your code into machine language that a computer can execute.
- **Algorithm:** A step-by-step procedure for solving a problem or accomplishing a task.
