LETTER  
OF THE  
MONTH

But there are problems in understanding many of the details of your articles by many of us young readers. If you could work somehow to include a query section in which readers post their questions on various topics or new tech terms, it would be of great help.

**Siddhant Kumar Yadav**

Dear Siddhant—

Excellent suggestion! We'll certainly think about an "Ask Digit" section or something along those lines. Keep the letters and suggestions coming!

## Blogging Boo Boo

I've been an avid reader of *Digit* ever since it was born after breaking up with *Chip*. I'm very happy to see the way *Digit* has become one of the leading Computer/Technical magazine in India, but also am disappointed at the pace at which the *Fast Track* is progressing.

This month's *Fast Track* was on blogging, and many facts stated in it are totally wrong. For example, Wordpress has been stated as both free and paid versions; Wordpress is a script which has been released under the GPL, which means it's totally free, and further, you've stated that there are only 53 templates available for Wordpress. If you visit <http://themes.wordpress.net>, you'll find that count is way less than what's really available. Apart from that, Blogger has been stated as a blog which can be hosted on an external server, which again is wrong; you can't host a Blogger blog anywhere apart from the blogspot.com server. And Wordpress being a blog which can be hosted on an external server has been mentioned otherwise.

You've missed important blog scripts like TypePad. The efforts of the *Digit* team are worth appreciating, but please don't dish out false information. Giving false information is worse than giving no information at all. I've been a blogger for about five years now, and also an active member on popular sites like sitpoint.com. Also, I really appreciate the efforts the team takes in bringing out the latest info about the hardware hitting Indian shores. But the *Fast Track* needs to be more up to date.

**Anirban Mandal**  
New Delhi

Dear Anirban,

True: Wordpress is released under the GPL, but it was the blog hosting service we were talking

about, not the script, when we mentioned "paid." You can buy "upgrades" for your WordPress blog for credits—basically, dollars.

In your Blogger blog, go to **Settings > Publishing** and you can choose the FTP option to publish your blog to your own server. Hope this clarifies things.

We must also add, however, that our in-house team doesn't consist of experts on all tech fronts, so our readers will have to bear with the occasional error. Thank you for your letter: it has reassured our belief that *Digit* readers are sensitive to *everything* we publish.

## Pilot's Chair

This is in reference to the fantastic article *The More The Merrier*, in the January 2007 issue. The doubt I have is: can a dual- or triple-monitor setup be utilised for gaming, for example, *Microsoft Flight Simulator*? Being a pilot myself, I feel the loss of visual cues from side windows is a major deterrent, and using the buttons to get momentary glimpses simply does not suffice. If, instead, I had a three-monitor setup, it would be a really immersive environment coming much closer to flight simulation than what is available so far. Taking the concept a step further, it would be an inexpensive and effective solution to simulating many environments, for example, a driving sim. But how does one go about doing that? Does *MS Flight Simulator*, for example, provide the ability to use three monitors for left, front, and right views?

**Atul Bhatia**  
New Delhi

Dear Atul,

Multi-monitor support is very game-dependant. Thankfully, in your case, *Microsoft's Flight Simulator 2004* does support up to four monitors. Not a lot of other games do this, unfortunately. For other games, if you're willing to use software rendering and run the game in windowed mode, you can either undock the additional views and drag them to another monitor, or just choose a really wide-screen resolution that will stretch the display across more than one monitor. Since most people do not like software rendering, it's best to stick to games like *MS Flight Simulator*, which will use normal hardware acceleration, and natively support multiple monitors.

## Must...Resist...

Recently, the topics in your mag related to piracy have been really touchy. In short, they have motivated me to look for free software. I recently had a nice experience that I thought I might share with you all: I got a CD teaching the basics of computers. It was really a nice CD for first timers. So I thought to copy it (strictly not for any commercial use, just for fun, as I didn't really need it). But soon I realised that something has been written on the CD: "Warning: copying this CD might corrupt your CD writer." It looked really awkward to me that such a thing can happen! I was confused and decided that this would not be possible. But that too didn't make me try to copy the CD; I left it alone! The moral is that little things too can stop piracy (though not on large scale); it still can bring some doubts in the minds of novice users!

I have a request: please include an article related to installing/uninstalling software on Linux! In the past three years or so, you haven't yet included this in your magazine!

I would also like to add that although your new interface for the CD/DVD are really rocking, I think you may have forgotten to think about some of your readers might want the CD/DVD to run on Linux too; even though it may be only 1% of readers who need it—they are your readers too! Please do something!!

**Nitin Kumar**  
Danapur Cantt.

Dear Nitin,

Thanks for your mail. And what a moral victory you have cited there! Congratulations for keeping true to your conscience and letting honesty play a role in your acts.

I know it is really tough to take the correct decision in such cases, and the lure to copy illegal material is too high. Your action is commendable.

As for your complaint regarding Linux installation and our discs—we've received a lot of such complaints. As of now, we cannot do anything about it that doesn't involve us stretching ourselves thin, but your mail has certainly left us thinking. Let me see what we can come up with—even if it is, as you rightly pointed out, preferred by 1 per cent of our readers.
