You Made Me

I have been reading *Digit* whenever I could afford one and find it at a bookstall. The magazine has greatly increased my knowledge in the field of computing, and the knowledge I've acquired has made me a geek amongst my friends. They come to me with all their problems... and it has enabled me to build my very own rigged Desktop. Thanks to you all, I have even secured a very good percentage in my university exam!

I say *Digit* rocks... and keep it up you guys... the magazine and the disc are great. I hope to subscribe soon, if I can find a vendor.

Tandin
Bhutan

Dear Tandin

Nice to hear that our magazine goes all the way to Bhutan! Or is it that you are in India and have picked up our magazine here?

Anyway, we are happy that our mag has given you the knowledge to be popular amongst your friends, not to mention that it has also helped you with your studies.

Keep writing to us—good or bad remarks—we love to listen to our readers!

Only You

This is my first letter to Team *Digit*. It rocks! A few days ago I got my gift: the CD was very useful.

Even my mother and father have started taking interest in the magazine; they too are getting aware of techies in the modern world.

I have been reading your mag from class six; my first issue was a gift from my brother on Christmas day. My experience with the other magazines has been disgusting! Please keep up the good work.

Aditya Agarwal

Helping Hands

I have read almost all your issues. I am a programmer. I am doing an M.Phil. in computer science and have taken the topic "Novel Solution to Personal Addressing with Timer" as my thesis. I have tried my best to find a Hindi text-to-speech Engine, but I was unable to. Perhaps it has not been developed yet. If it has been, please provide it in your forthcoming issue. Otherwise, provide a Text to Speech Engine which has the feature of an Indian announcer speaking in English. I have tried my best, but I was unable to find such a speech engine. I have chosen Visual Basic 6.0 as the development platform. Thanks!

Bijender Kumar
Sisar (Haryana)

Dear Bijender,

Here's a link that might help you out:

www.blissit.org/hinditexttospeech.htm. It speaks of a Hindi text-to-speech engine, and it is not the only one being developed. Do visit that link, contact the creators, and you're sure to take off from there. If you need some clarification, don't hesitate to write back.

Review Freak

I bought my first copy of your magazine in August 2005 and haven't missed a single issue since then. All the columns and articles are very informative. I especially like Agent 001 and the product reviews.

I'd like to suggest that you make your reviews more elaborate, since many of your readers (including me and my friends) rely on this for their next purchase or upgrade. I have noticed that many of the good products out there in the market get missed. Moreover, it would be better if you include some programming tips in your "tips and tricks" section. I also want to know whether you conduct reviews of camcorders or not.

Anyway, you guys are doing a fabulous job!

Ravi Shankar Singh
Bokaro Steel City
Jharkhand

Dear Ravi,

Thanks for your mail and suggestions. We will certainly incorporate them as and when possible. Nice to know that our readers read

our magazine so closely, and also feel like writing in with honest feedback. We do conduct reviews of camcorders once in while, but not extensive reviews like our scheduled tests.

Programming tips and tricks is currently not our expertise or our target domain, but we will try and get someone to do that for us in the future.

Get Better Already!

It is great to see your magazine growing fast and better compared to other magazines throughout the past many years. I wish *Digit* would become more relevant for all. I think you can now choose programming as a *Fast Track*. It may help starters or hobbyists. Some reading material can be added in the disc. Some book reviews may help all. A column for students would be good.

Inderdeep

Dear Inderdeep,

Good suggestions. We are indeed thinking about one or more *Fast Tracks* on programming, and we are also pondering devoting space in the magazine for students. I am sure you will find this month's *Fast Track to Students' Web* pretty interesting

World's Greatest?

"CRAZY KIYA RE!" Hey *Digit*, you make me crazy. Change your mag title from DIGIT to DilJEET because *aap ne logon ka dil jeet liya hai*. I await your magazine like a *bird chatak*. I really like the content of the CD/DVD and magazine. I'm a fan of your *Fast Track* series too. You had given a *Fast Track to Web Designing* in July 2006. Can you give a complete *Fast Track* to HTML designing?

Is there any translation software that can translate from English to Hindi or other languages? If so, then I'm very happy if it has been given on your CD/DVD—either a freeware or a trial version.

Again, thanks for giving us the world's greatest tech magazine!

Satyajeet S Patil
Amravati

Thanks for your mail, Swapnil. We are delighted to hear that our magazine makes such a difference to the lives of people.

Regarding a *Fast Track to HTML*—well, let's see if we can do that too. The translation
