

lot of Chinese computers!

All this is quite pointless, of course—it's just a few fun facts that you readers should know. The one time this little news article can come in handy is when one of your *Amreeca*-returned buddies comes back for a holiday and tries to find fault with India, Indians, and our non-functional system for cyber-crime...

ONECARE DOESN'T CARE

Microsoft's Anti-Virus The Worst

Microsoft's Windows Live OneCare security suite is apparently not as secure as they think. OneCare is Microsoft's foray into the security suite world that is already hotly contested by companies such as Symantec and McAfee. Now, one would think that since it's built by Microsoft, it should be able to do a pretty good job, protecting other Microsoft products (namely,

Windows XP/Vista and IE), right? Wrong. Various security experts who conduct security suite tests, including AV-Comparatives (www.av-comparatives.org) have already pish-toshed at Microsoft's attempts. Andreas Clementi, the AV-Comparatives reviewer has gone as far as suggesting that OneCare might not even be included in the next comparison, because it's just no good!

Microsoft was quick to do the necessary PR clean-up job, promising to look into the test, and make sure that OneCare performs better. Of course, since OneCare is still a registered security suite, certified by the International Computer Security Association, it will continue to be sold. We must concede that it's still early days, and OneCare, very obviously, can only get better.

What worries us is that it's a Microsoft product, which is obviously being scrutinised by every hacker and script kiddie for flaws. Do we really want to be using security software from the most virus-

Stat Attack

It's all in the numbers

Nigerian (419) fraud increased in India **900** per cent in **1 year**. Losses totalled **\$32 million** in 2006. Worldwide losses total **\$28 billion**
