targeted software company in the world? Of course, in a few years Microsoft may make us eat this very paper we've printed on, by using the whole experience to build another stable and secure product—and we'll be only too glad to pay for the ketchup to help digest the paper. It's ironic, isn't it? All those virus-writers out there are unknowingly helping Microsoft clean up all the bugs in their code, resulting in more stable products by the day. Perhaps 25 security patches down the line, OneCare will win the 2008 anti-virus test. We look forward to the day.

MORE MICROSOFT NEWS

Live Search Vs. Google

Good news for corporations in the US. Microsoft has offered to pay if companies force employees to use its Live Search engine. Now before you start jumping up and down screaming foul

and shooting off letters to your favourite, Google, you should know that Microsoft is not paying just *anyone* who uses Live Search, well, not yet at least. Instead, it is conducting a study on how well Live Search does in catering to corporate clientele. They're not paying up hard cash either, instead, they're offering the corporations free service or credits (redeemable for products or training). The current rate is \$25,000 for enrolling, and anywhere between \$10 and \$2 per computer, per year, depending on the amount of searching done. What this means is that a company with 20,000 computers, all of them using search

frequently, can earn up to $\$10 \times 20,000 + 25,000 = \$225,000$ (over Rs 1 crore annually), just by using Live Search!

We're wondering what Google will have to say about this...

SONY MAKES PS3 CHEAPER

PS3 To Be Less Compatible With PS2 Games

In a bid to drop the price of the expensive PS3 gaming console, Sony has decided to remove one

chip. The chip in question is responsible for graphics and data processing for older PS2 games. This means that the PS3 will be even less backward-compatible than it is already. Although the US versions have this chip, the European versions will ship sans the Sony-made microchip, and as a result, many European gamers are either going to have to hock their PS2 games, or use two consoles.

The move seems like a desperate attempt by Sony to drop prices of its console
