Fuelling The Pursuit Of Technology Knowledge

What do you get when you put a few bored geeks in a room full of scrap?

Extreme Mods!

AGENT001

It was a day like any other, and that's where the problem began. I was bored out of my skull. Same old chair, booth, meeting room, canteen food, you name it... I've been here long enough to be considered furniture. Don't get me wrong, I love my job, but it's the surroundings that never seem to change. I asked my CEO if he'd considered re-modelling the office; the reply was loud guffaws, very similar to what I heard when I asked for an Alienware rig. Oh well, it was worth a shot.

As usual, I used the lunch break to bitch to my colleagues about how boring everything was. A few pats on the back, the occasional jibe and

comments about mid-career crises later, I wasn't feeling any better. I *had* to do something different.

While surfing, I came across some extreme case mods online, and lo, a voice said unto me, go forth and mod. I gathered the troops, told them my plan, and... well, apparently, we geeks bore easily, so I had volunteers crawling out of the woodwork.

What Should We do?

Someone asked that. There was silence. Here we were, a group of men (all little boys at heart) aching to start cutting up something, but with no plan in mind. "If we do a case mod, it has to be something practical, something of purpose," said Robert. "It better be for an article," said Deepak (Ed). "Let's use your new LCD," said Nimish. Nooo, anything but that! My new 17-inch LCD was my latest office gizmo, and I had just fallen in love with it.

After a day of fighting over the details, here's the logic that emerged:

We figured that a lot of people will be buying LCDs, or have already bought one. They probably have an old CRT lying around, or will want to sell it for a pittance. So we decided to use an old CRT monitor and our New LCD and do our bit of geek stuff.

Usually, case modding is considered the gamer's realm, or at least an area where only people with money to blow dare tread. We decided we wanted to break this myth, and do a case mod that would cost as little as possible—something that anyone with a few basic tools and the will to use them could achieve. We decided, with vehement arguments from me, to use my system, LCD and all, for the case mod.
