

Canon HV20

While most of your friends are busy showing off their clumsy little DV cams, it's a good idea to go get yourself the soon-to-be-released Canon HV20 camcorder. Why's it special? Gone are the days of PAL / NTSC resolutions. The Canon HV20 is powered by a massive 1920 x 1080 sensor. This makes it perfect for shooting HD-resolution videos and then watch them on your HDTV using the HDMI interface. It has a 24p Cinema Mode, which allows even a novice to give a film-like look to videos. It also works as a 3.1-megapixel still camera. The Digic DV II will ensure great video quality, so it's goodbye to all the graininess and dull, de-saturated colors. It also lets you shoot a 2-megapixel photograph, while shooting live video footage. The camera is expected to be priced at a little over \$1,100 (Rs 50,000).

Droolmaal

The good stuff.
Stuff to lust after.
Stuff for the well-moneyed.

Sony Reader

This is an e-book reader that can read PDFs, JPEGs, BBEB books, as well as MP3 and AAC e-books. The Reader's batteries won't die out on you before 7,500 pages have been read! Connect it to your PC, and start up the CONNECT program—and a wide range of books are available for you to browse through. You can then go on to buy them and download them to the Reader. CONNECT will convert Microsoft Word and RTF files for you before dumping them on to the Reader. There's enough space for up to 80 books, and memory sticks can be attached to increase the space. The screen is better than most LCDs, and has a viewing angle of up to 180 degrees. What's not to like? You can also dress it up in a nice leather cover.
