

save it to a project file. You can access your profile page to manage your projects at any time using the icon in the system tray, and even share your projects with your co-workers or friends over the Internet.

WordClick

Searching could never be easier when you have WordClick at your disposal, an add-on that allows you to search for just about any word you see in your browser with something as simple as a mouse click. And no, this doesn't require you to remember any complicated six-key shortcuts, all you need to trigger the Google search is to keep your mouse over the word and simply click on it when it turns into a hyperlink. WordClick doesn't restrict searches just to Google—you have the option to search on Google, search Amazon when you [Alt]-click, or search on eBay when you double click. While only three shortcuts are available, you also have the option to change the shortcut assignments to search on MSN and Frazoo in addition to the search engines mentioned above.

QDictionary

As simple as it sounds, QDictionary allows you to select any word when you are browsing and look it up in a dictionary. There are no fancy features to go with QDictionary—who would really need them? QDictionary adds itself in the right-click menu of Internet Explorer 7, so all you would need to look up a word is to select it, right-click and select "Look up" or "Thesaurus". Note that this program actually depends on the Web site www.m-w.com, so you'll need to be connected to the Internet before looking anything up.

FindAsYouType

Whoever said that only Firefox has the feature to search text in real-time? The FindAsYouType add-on for Internet Explorer 7, too, does just that. To use this add-on, just press the shortcut key ([Ctrl] + [F]) to find, enter your word and press... oh wait! There's no need to press OK, because your search result is already highlighted! You can keep pressing [Enter] after entering the word to search similar words further below the page. This is extremely handy—live searching is much faster and efficient, enabling you to make corrections to your search in real time.

Trexy Toolbar

Yet one more tool for researchers on the Web. Trexy Toolbar keeps track of all your search trails, making sure you won't forget your search phrases when you need them. All you need to have to do is select a search engine in Trexy Toolbar from which you will be searching, and get then continue searching normally. Trexy Toolbar will silently log all the links you clicked and sites you

visited since your first search. When you need it, you can trail your search links backwards all the way to when you had initiated your search.

Internet Explorer AutoRefresher 1.0

Small, compact and powerful, AutoRefresher for Internet Explorer 7 is one of the most useful additions in the list. With AutoRefresher at your command, you will never need to pound the [F5] key to refresh your page; just relax while AutoRefresher does the job for you in an interval specified in seconds. What's more, you can even have different time intervals for different windows and tabs. The AutoRefresher can be quite useful when you need to constantly check certain sites for news (or cricket scores) or when you are awaiting replies on forums.

Wiki-Toolbar for IE7

Everyone is familiar with Wikipedia, especially researchers. In fact, most of us go directly to Wikipedia to look for the information we want instead of search engines like Yahoo! or Google. The Internet is plastered with toolbars for just about search engine out there, and the plague has just been spread even to good ol' Wikipedia. The Wiki-toolbar allows you to enter your search for anything on the Wikipedia site in any of the site languages specified. That's not all this toolbar includes, the Wikipedia toolbar also acts as a general purpose toolbar complete with pop-up blocker, mail checker, Google search, and more.

MySpace Toolbar for IE7

MySpace Toolbar, as you must have guessed, gives you access to shortcuts for the most common actions on www.myspace.com, one of the biggest social communities on the Internet. The MySpace Toolbar also acts as a general toolbar for everyday operations—e-mail notifications, weather updates and so on. Only those who frequent MySpace will find this toolbar useful—it provides plenty of hot links on the popular Web site, including the infamous love note maker, wavy and glitter text generators, and common features like search, favourites, browse, blogs, forums, etc. It's a must-have for any MySpace addict!

iMacros Freeware Edition Toolbar

Macros are extremely useful functions in any application. They can automate practically any of your tasks, and now macros extend their reach to even Internet Explorer. No need to check the same sites every time you open your browser, no need to type in your username and password every time you want to login to your favourite Web site. Not when you have iMacros at your disposal. With iMacros, you can browse to your preferred forums, enter your login name and password, create a new thread and write text in it, all the while searching for a specific word in the forums in a separate tab. Any browsing task can be automated with iMacros; people who often work on the Internet will rely on this tool as a bare necessity. ■
