

LASERAGE GOLD

What It Is

This game is simple. No story... literally! No complicated controls, no complicated options, no nothing. Just start the game and get straight to business. The objective is to guide your ship to dodge and destroy waves of enemy ships with differing weapons and AI on the top of the screen. As you destroy waves after waves while not dying, you will encounter the final boss of that tier who will be much more difficult to deal with. The game becomes more difficult as you keep playing—the enemy ships become harder to dodge. The controls are rather simplistic—just the mouse movement and the good old left-click can control the entire game.

Why It's Addictive

Laserage Gold has absolutely nothing other than raw addictiveness to stand up for it. The controls are simple; the power-ups that spawn as you battle through your enemies keep things a bit interesting. But the game has a kind of tendency to train your reflexes to a point that you click restart every time you die, without even thinking about it. The high score feature adds to the motivation of playing the game; you will be constantly hungering to beat your last high score. *Laserage* doesn't have much, and has plenty at the same time; you will be getting yourself a 'fix' of it every single day.

ICY TOWER

What It Is

It seems the developers thought, "Guess we better add a story?" and just slapped one into the readme. *Icy Tower's* story is rather simplistic—one day, Harold had nothing else to do when he came across a huge tower after which he thought "Ey, I bet a homie like me can do some mighty cool jumps and moves in here". And so it goes—you have to help Harold make the highest and coolest jumps in history.

You choose from up to 3 players to play in the game. It's a 2D game which consists of you trying to jump up levels of icy floors, the screen will scroll up faster as you go to the higher levels, you die if your character disappears below the screen as it scrolls up, or if you fall down, so make sure to keep jumping up without looking back...er...down.

Why It's Addictive

If you are thinking, 'What's so addictive about jumping up platforms?', then you really need to get a taste of the game to find out. *Icy Tower* requires a decent amount of skill to get a good score. There's more than just jumping up platforms. There are tricks to make higher jumps, your character accelerates as it moves further and makes higher jumps. You can make combo jumps, or have your character bounce off the walls to get to a difficult to reach platform, or jump only on special platforms (we'll leave it to you to find out what they are like) to make sure you rake up the points.

You will find yourself hooked on boosting your overall score, or finding different ways to perform jumps. If that's not enough, there's also the ability to save your replay and upload it to the main Web site to give you your fifteen minutes of fame.

BIKEZ II

What It Is

In *Bikez II*, you are a mercenary biker in the future; the state of the city is bleak with gang wars erupting everywhere. Enter *Bikez*, the local criminal faction that has just signed a contract with you to complete missions for them, which become increasingly difficult over time. And of course the missions don't include babysitting or bringing vegetables for them—it's about a whole lot of action, killing, guns and blood.

You can satisfy your destructive desires with the weapon attachments on your bike. The world is fairly big for a freeware game, and there are outlets where you can customise your

weapons—including things like homing bullets and an increased rate of fire. Of course, customisations require precious moolah, which you can earn by completing the missions thrown at you.

Why It's Addictive

There's already a shortage of Bike games in the market; couple that with something like *Carmageddon* on a bike, and you have a game you will not want to let go of. The hunger of firing a weapon at its maximum rate of fire drives you to complete missions for the money to buy them. However, that's not the only way to earn money—if your bike is too damaged to complete a mission, you can always run over innocent citizens to generate money, repair your bike and go on to the missions. And for bullet time lovers, there's also a slow motion key to drool over the carnage you dish out. *Bikez II* is sure to keep you hooked for hours completing one mission after another, you will forget what the words 'quit' or 'exit' mean.
