Digit Reader Poll

This Month's Question

What best describes your file-sharing activities?

- ☐ A BitTorrent client is in my startup! No guilt!
- ☐ I download a little, and I don't feel I'm doing much harm
- ☐ I've done it a couple of times and felt guilty
- ☐ I'm not quite sure how to download movies and music

C++ LEARNING GUIDE

This is a basic guide which I have come up with for the people who are looking to go for C++. I have tried to keep it simple so that everyone can understand it.

I had been working on this for last couple of weeks. Any comments/suggestions are welcome.

NOTE: This is a beginners guide so don't expect too much, I made this guide. Keeping Mind that learner is a newbie in C++. Hey now don't think I am an expert. Sorry for the mistakes I have tried to cover every aspect.

INTRODUCTION

C++ is an object oriented programming language. It was developed by Dr.Bjarne Stroustrup in the year 1983 at AT&T Bell laboratories, New Jersey {U.S.A}. It was originally named as C

with classes. The name is derived with the increment operation in "C" which is '++'. So it is the incremented version of C.

An object oriented programming language means collection of objects which are self contain collection of both data structure and functions that interact with other objects. It adds classes, inheritance, functions overloading and operator overloading.

"With the help of C++ we can develop editors, compilers, communication systems, database and other real life time applications.

Note: - C++ codes are case sensitive so every command/codes written should be in Small Letters

CHARACTER SETS

There are 2 types of character sets:-
• Source Character :- The source text

is created with the help of source character such as :

- Alphabet: - A-Z, a-z and _.
- Digits: - 0-9.
- Special Characters: - +, -, *, /, ^, ~, %, =, !, &, |, (,), [,], ?, " ' ; , : , \, #, .

POST & PRE OPERATOR

An operator that require only one operand or data item are called unary operators. C++ supports unary minus(-), ++ (Increment), -- (Decrement) on arithmetic operands. In C++ the other unary operator are ++ (Increment), -- (Decrement). These operator can be used before or after the variable, to give condition type increment and decrement.
