but also use the timeshift feature. Timeshift is a feature that lets you pause or even rewind live TV, so you can watch an action replay as many times as you wish to. This is a resource-hungry feature, requiring at least a 1.6 GHz CPU and a 7200 rpm hard drive, both of which are standard on any PC these days. This feature is supported by all but the Tech-Com SSD-TV-670. MPEG-1/2/4 recording is standard in all PVRs, except some such as those which come with the PixelView

PlayTV P3000, which do not support MPEG-4, and the one that comes with the Pinnacle PCTV PCI that does not support MPEG-2.

Recording requires oodles of free space. While most PVR software can hold their own against each other, some such as the WinFast PVR shine because of features such as PIP (Picture-in-Picture), which lets you view live video in the background and captured video in a window.
