Final Score (Out of 100)	73.44	68.83	71.14	57.71

* This is the total number of available cable channels during the test

+ Excellent visual quality
- Very expensive

+ Economical
- Low resolution

+ Good channel detection rate
- None in particular

+ AV-In functionality and cables
- A bit expensive

it. Though priced a bit too high, this is as close to TV you can get on a monitor, and it is therefore the winner of the *Digit Best Buy Gold* in this category.

At a fraction of the cost of the Gold winner, the Tech-Com SSD-TV-722 has most of the features you would expect from any TV-Tuner option in its category. We award it the *Digit Best Buy Silver*.

While Digital Television in the form of DVB-T has been in India since 1999 (See box *Digital*

Television), it has been limited to the four major metros. Then there is DTH CAS (Direct-To-Home Conditional Access System, a pay-per-view cable system), which again is limited to the four major metros at present. But with satellite television providers such as DishTV and TataSky making strong forays into the market, the Indian consumer outside of the metros will finally get to see what digital television looks and sounds like.

The problem here is that these providers install a dish receiver and a set-top box tuner. What this means is that the tuner in your TV or your PC becomes obsolete (along with your trusty remote), and the sole function of a TV set or TV-Tuner is to accept the audio and video signals of the channel descrambled and tuned by the set-top box. We hope that in the near future, TV-Tuners that can descramble video signals and also tune channels from these providers. ■
