India's first home made forum software

AEF - Advanced Electron Forums

Link: <http://www.anelectron.com>

It is written in PHP and MySQL

Well I think that this software as far as I recollect is India's first home made forum/Bulletin Board software. This software is OK as compared to the other giants like IPB, vBB, SMF. However it is better than phpBB. But for a month old software it is pretty decent and its prospects are beginning to show up.

The first version was not that great but recently they made the new version 1.0.2 and they have included some pretty good features like a shoutbox, news system (with news articles - this is not featured by many others listed above), threaded mode, suggest framework, dom drag stuff (I have seen this thing for the first time on any forum software), etc. I particularly like the DOM Drag they introduced, its something new and novel. Well also it is very fast.

Coming to the looks I just Love the EYE Candy these guys have put up in the theme. Its so much better than that of the boring SMF and PHPBB looks. AEF has used some good amount of designing and it is a good reason for trying it out.

Well I think this software is good altogether and is worth a try. Have you guys tried it out?
