

Goodies Galore!

HP provides a fully-functional complete system recovery suite, but apart from that, the bundle is light. LG provides a system recovery suite from Stellar, and for some weird reason, FreeDOS!

Once again, no-one provided speakers. We were also disappointed to see wired keyboards and mice with all these PCs. We were equally shocked to see only 80 and 160 GB drives being shipped with all these.

In terms of expansion, the Sahara 20CK16 provides all that you'll need—the huge cabinet will handle four hard drives and two optical drives. The motherboard provides four SATA ports, and one PCI Express x16 slot with a 7600GS graphics card. Strangely enough, this card features 512 MB of video memory—this is overkill for the GPU core. Sahara has been miserly with the monitor—a 15-inch LCD just doesn't justify this kind of video hardware.

Performance
Duelling Desktops!

Up front, the Sahara 20CK16 has superb specifications. With a brand new Core 2 Duo E6320 and 1 GB of system memory, along with a graphics card of the GeForce 7 family, this PC can lay

Sahara 20CK16
Great components under the hood

claim to being something of a gaming machine. Although hardcore gamers will look at faster graphics cards, this one is definitely capable of running most current-generation games at medium settings and moderate resolutions.

The HP Pavilion a6110in features an AMD processor that is slightly slower than the fire-breathing Core 2 Duos, but tries to compensate by providing a very capable video solution—the integrated GeForce 6150 should be good for those looking for a multimedia PC—good HD video acceleration, among other things.

Compaq has another solid offering in the Presario SG3063IL, though we couldn't stomach the tiny 80 GB hard drive. The Zenith 401G is deceptively fast—the E6320 sees to all your processing needs quite well. The monitor makes for a crisp widescreen experience—definitely worth it for movie buffs.

Conclusion
Which is mine?

If you want something powerful enough to crunch through most applications and multitasking, look at the Sahara 20CK16 and the Zenith 401G. The 20CK16 is recommended for those looking to work with image editing or even casual 3D rendering work. It steals our *Digit Best Buy Gold* award on the basis of its sheer performance.

Another very capable multimedia PC, thanks in part to a very good integrated graphics solution, the HP Pavilion a6110in is our *Best Buy Silver*. We'd have liked to see a faster processor here, though. HP bundles

Rediff iShare

Rediff launches India's social content sharing platform

Rediff which already enjoys a 40% (approx) reach in India, recently launched its online content sharing platform – iShare. What sets apart iShare from other online content sharing products, is that iShare is a platform where users can upload not only videos but also music and photos.

iShare supports most of the formats of pictures, videos and music in mobile phones, digital cameras, camcorders and digital media players. This makes it extremely easy for consumers to upload on iShare.

iShare also opens opportunities for Indian youth to showcase their talent on the Internet and build friends and communities around common passions.
